

A pilot experiment

Haozhe Sun

- Before moving to group setting, can individuals form and generalise useful abstractions when solving these sorts of puzzles?
- Can we infer their abstractions by doing library induction on their sequence data?
- Pilot with N=80 Prolific workers
- Shared tutorial, introducing each available action
- 3 “training puzzles” unique to condition with different common sequences embedded, then 5 “test puzzles” shared by both conditions involving one or both sequences
- Had to make at least 5 attempts at each (or succeed), timeout at 30 actions per attempt, bonuses for successful completions

**“Reflect”
Condition
Training**

**“Flower”

Performance

- Task is hard: **44%** / **51%** of puzzles solved (12% of all attempts)
- Mixed-effects logistic regression predicting $p(\text{Solve})$:
 - No main effect of Condition
 - Worse at Reflect 1 ($p=.044$) and Reflect 2 ($p=.044$), taking “Both” as baseline
 - Flower trained participants then worse at Reflect 1 test problem ($p=.007$), *but also marginally worse at Flower 1* ($p=0.050$) 🙄

Performance

- Reflect training was harder
- Participants that succeeded in Reflect training did better at test in all problems

Extremely preliminary MCMC analysis

- Inferring individual participants libraries:
- Likelihood: The sum of the random-generation probability, of all possible parses of the action data with a candidate library
- Prior (favouring simpler grammars)
- Proposal:
 - Either: concatenate existing elements and add/upweight
Or: decrement downweight on existing (nonbasic) element
(Or: Introduce/delete a non-terminal)
- Acceptance function: Metropolis-Hastings (with detailed balance correction): stochastic acceptance based on unnormalised prior*likelihood (correcting for probability of proposing in either direction $L|L' / L'|L$)

Participant libraries

How do people feel about the task?

"It was very challenging but fun"

"I enjoyed the task but found it frustrating at the same time I was pleased when I solved some but did find it very hard generally"

"It was very challenging but fun"

"I found it quite difficult but it was fun too"

"I liked it lots of symmetry involved"

"That was completely impossible I have never done a study that caused me to throw stuff across the room until now I am great at puzzles much better then my friends and coworkers I am always finding new puzzles to do"

"Ridicules and very frustrating Didnt enjoy at all and just wanted to finish it and get it over with"
